

## COVERAGE FOR A PROVIDER OUT OF THE OFFICE

March 2025

**Goal:** Improve patient care by standardizing vacation coverage for all VMG practitioners when they are out of office. Prioritize work to be done to assist nursing for low staff days. Improve sustainability of primary care for practitioners.

### Provider on Vacation OOO

- ✚ Priority goes to people on vacation (out of office >2 consecutive days)
- ✚ We ask providers to "empty box" and sign CSRP scripts prior to vacation (CSRP needs to know 2 weeks in advance in order to have time to pre-que.
- ✚ When providers don't clean out their boxes, coverage is much harder; nursing goes from day that provider started being off and out of the office (OOO).
- ✚ Providers to communicate "pending work ups" or "at risk patients" with their teams to facilitate completion of things while they are away.
- ✚ We ask that nursing manage cases, do grid work (labs/clinical documents) and understood to support this coverage this is generally this is not just one person but spread out.
- ✚ Exception is VNA orders, disability forms (usually appointment should be booked) and delegated orders that are left for "covering" providers to go into box and sign off on.
- ✚ Patient cases should only be in the vacationing providers box if they say "hold for provider" which indicates that someone has reviewed it and deemed ok to leave. Overall goal is to have as little left in vacationing provider box as possible.

The "**covering**" **provider** is assigned each day and is expected to address urgent needs of patients and nursing questions for the OOO provider.

### Normal day off coverage

- ✚ For providers out of the office for their normal day off, **only urgent needs** are forwarded to the covering provider.
- ✚ Providers are expected to manage most of the things that come into their box with the exception are those things covered by nursing grids when they have staffing. Nursing tries to get to the boxes for clinical/labs grid as much as possible.
- ✚ Lastly, if there is time nursing does grid work for provider in office.

*Accepted variation in practice at health centers.*
